USB-RS232 Adapter
USB-2-RS232 II

The adapter cable UBS-RS232 is a user friendly interface adapter from USB (version 1.1 and higher) to RS232.

Each PC with USB port can thus be equipped with an additional serial interface according to RS232 standards. This is particularly interesting for users of notebooks because notebooks often lack an interface or have only one serial interface.

The adapter cable can be used for all TURCK devices which feature a serial port, e.g. the programming adapter IM-PROG or the fieldbus systems BL20 and BL67.

The delivery includes the driver for Microsoft® Windows 98/ME/2000/XP.

Power supply is provided via USB port at the PC.

- USB 1.1 and AMP 1.2 compatible
- Data rate ≥ 1 Mbps
